Roundtables

Roundtable discussions have been integral parts of the NATCONSUMER's way of working and will as such enable participants to experience the process and discussions from the project. With these roundtable discussions, the most important issues will be highlighted again and new angles will be introduced.

Day1:

"The means of Engagement" (SDS)

From the Design Jam Work Shop to User Groups. What did we learn about User Engagement and what difficulties remain to be further researched?

"Developing a corpus – how to get started" (Izertis, EST)

The technology is still just a technology. What are the means to enable the functionalities of the NATCONSUMERS self learning tools?

"Dealing with smart-meter data – technical and ethical questions" (ARIOSZ, IZERTIS, VAASA)

What are the biggest issues concerning residential energy data. What can we learn from them and how should they be handled?

Day2:

Integrate the NATCONSUMERS tool into a Utility daily practice – opportunities and barriers (VINCENT RITTENER - ENOVOS)

Seen from a utility perspective. What are the main barriers to introduce a NATCONSUMERS tool?

Focus on Special consumer groups? (SIFO)

What's the potential for using the tool to also address specific consumer groups like disabled people or fuel poor?

How to change behaviour and make it last. (R. Galvin)
